

Retail Analysis

Introduction:

We are an E-Commerce Company that is continuously working on optimizing the app.

Make a detailed report using Excel which captures the below insights. Feel free to explore the data on your own and present any exciting insights you find.

Note: Kindly use SQL only to generate the data required for the report making.

Problem Statements:

1. Make a dataset (Using SQL) named "*daily_logins*" which contains the number of logins on a daily basis
2. Daily trend of logins and trend of conversion rate (Number of orders placed per login)
2. Which KPIs would you use to measure the performance of our app?
 - Login to Order conversion rate
 - Decide Others
3. Prepare a report regarding our growth between the 2 years. Please try to answer the following questions:
 - a. Did our business grow?
 - Revenue difference answers
 - b. Does our app perform better now?
 - No_of_Logins difference
 - No_of_Orders difference
 - c. Did our user base grow?
 - user_id differences

4. What are our top-selling products in each of the two years? Can you draw some insight from this?
5. Looking at July 2021 data, what do you think is our biggest problem and how would you recommend fixing it?
6. Does the login frequency affect the number of orders made?
7. Give at least 2 insights that are not mentioned above and are not clearly visible from the data.

Data Details:

You will find 3 tables attached in the Raw Data.

- The login_logs table contains information about users logging in.
- The sales orders table contains information about orders made
- And the sales_orders_items contains the specifics of each order.
- You have been provided with data for July 2021 and July 2022.
